

Application table

Application:	All Traction Hoist
Reason:	Safety Advisory
Frequency	As Needed
Priority:	Safety Advisory

Background

In a recent SAR (Safety Action Report) it was reported that there was a near miss regarding a gloved hand getting pinched between the wire rope and inlet guide on a traction hoist while reeving.

Solution

Review the proper method to reeve a traction hoist and appropriate safety precautions.

Procedure

To safely reeve a traction hoist precautions should be taken to keep hands, loose clothing, jewelry and gloves away from the pinch area of the wire rope and inlet of hoist. Failure to do so can result in injury.
