SER 18-001 Rev B Overspeed Safety Device Recommended Operational Procedure February 21, 2018

Ы			

There have been reports of some operators not resetting the Overspeed Safety Device after performing the pre use inspections of the hoist, or using the Overspeed Safety Device as a means of additional security while the stage is stationary and not resetting prior to moving the stage upward.

COMPLIANCE CATEGORY  Safety  Failure to comply with this product update could result in personal injury. Compliance is mandated within a specific operating time.	PRIORITY CODE  1 Prior to unit startup or prior to continued operation (Immediate Action Required)			
Compliance Required Identifies the need for action to correct a condition that, if left uncorrected, may result in reduced equipment reliability or efficiency. Compliance may be required within a specific operating time.	2 At first opportunity (Prior to Next Scheduled Maintenance Interval)			
Optional Identifies changes that may be beneficial to some, but not necessarily all. Accomplishment at customers' discretion.  Notification Customer communication, no action required.	3 Next Scheduled Maintenance Interval  4 Optional / Notification

### **ACTION REQUIRED**

The function of the Overspeed Safety Device is to stop the downward motion of the hoist once engaged. To reset the Overspeed Safety Device it is necessary for the hoist to travel upwards a few inches to release the eccentric cam from the wire rope.

It is required that anytime the hoist is moving that the Overspeed Safety Device be set in its normal operating position. Failure to reset the Overspeed Safety Device can cause accelerated wear and pose a safety risk.

Due to the release of the Noise Reduction upgrade that includes identification electrically that eccentric cam was tripped (red illumination of Down button), a procedure change is required to the daily inspections checks as outlined below.

#### **Testing the Overspeed Safety Device Test Button:**

- Push the Up operation button and raise the platform approximately 3 feet (1 meter).
- Disconnect Power from the hoist.
- Lift the Control Descent Lever, as the hoist begins to descend push the Overspeed Test Button.
  - The hoist MUST stop immediately!
- Reset Overspeed Safety Device per "Resetting the Overspeed Safety Device" procedure

Overspeed Safety Device
Recommended Operational Procedure
February 21, 2018

## **Resetting the Overspeed Safety Device:**

- Reconnect Power to the hoist.
- Power the hoist up a few inches while at the same time turning the reset knob clockwise until the reset knob engages.

After resetting Overspeed Safety Device verify the hoist moves downward using the controlled descent.

Note: For clarification the Overspeed Safety Device may also be referred to as "Overspeed Brake".

# **ACCOMPANYING DOCUMENTS**

Refer to the 9961 Operator's Manual included with the hoist and Daily Inspection Checklist 703210, attached.

#### WARNING

BEFORE operating this hoist you must understand and follow the instruction in the 9961 Operator's Manual. All hoists <u>MUST</u> have a copy of this manual, if one is not present with this hoist; contact your local Spider Representative. You must be properly trained, in good health, and authorized to operate the hoist. Failure to comply with these instructions could result in serious injury or death.

\*\*If you do not have a copy of the 9961 Operator's Manual for this hoist, please contact your Spider Branch. **Local Spider Branch:** Phone: These instructions are not all inclusive. It is impossible for Spider to know, review, and instruct on every possible way this equipment may be used, and on all possible hazardous situations. Any deviation from the instructions in this operator's manual may jeopardize the safety of yourself and others, and/or result in damage to the equipment. DAILY TEST REQUIREMENTS The following tests must be performed at the start of each work shift. If the hoist fails any test, DO NOT use it until it is repaired. WARNING Perform all daily tests to ensure correct operation! Do not use the hoists for lifting until you have successfully completed the daily tests. TESTING THE OVERSPEED BRAKE While powering the hoist up and down approximately 3 ft, look through the access window. Ensure the fly wheel is turning. De-reeve the wire rope. 2. Reinsert the rope about 12 inches into the hoist. 3. Holding the wire rope firmly, pull it out quickly. If the brake is working correctly it will grab and hold the wire rope in less than 4 inches. Repeat this test at least 3 times. If the brake does not work correctly, return the hoist to your Spider Branch. DO NOT USE THE HOIST. 4. Reset the overspeed brake. TESTING THE OVERSPEED BRAKE TEST BUTTON Push the UP control button and raise the platform approximately 3 ft. 2. Disconnect Power from the hoist 3. Lift the Control Descent Lever, as the hoist begins to descend push the Overspeed Test Button 4. The hoist must stop immediately! 5. Reset Overspeed Safety Device per "Resetting the Overspeed Brake" procedure RESETTING THE OVERSPEED BRAKE Reconnect Power to the Hoist Power up a few inches, at the same time turn the overspeed brake reset knob clockwise until the reset lever engages. If

there is not enough traction to raise the hoist, pull downward on the tail line to increase traction.

After resetting Overspeed Safety Device verify the hoist moves downward using the controlled descent. Note: For clarification the Overspeed Safety Device may also be referred to as "Overspeed Brake".
