**SUB COMPONENT**  
 Wire Rope

**ACTION REQUIRED**

The operator’s manuals prior to January 2019 mistakenly stated comments that were not meant to be in the manual regarding wire rope lubrication in Section 11.5.

The two comments stated: “Regular lubrication of the wire rope ensures that the wire rope drive remains sufficiently lubricated.” & “Lubrication substantially increases the service life of the wire rope drive. Proper lubrication does not adversely affect the drive capability.” In addition, section 11.5.1a stated: “Always keep the wire rope slightly lubricated.”

As the wire rope is already properly lubricated from the manufacturer, additional wire rope lubrication is not required or recommended. Subsequently, the statement has been removed from the manual effective January 2019 as it was previously placed in the manual in error.

Note: Always ensure proper wire rope inspection criteria are followed as outlined in the manual. Replace as necessary.
